

Dolphins are highly intelligent and known for their playful behavior. They communicate with each other using a variety of clicks, whistles, and body movements.

Whales are among the largest animals on Earth. Some species, like the blue whale, are the largest animals to have ever existed, even bigger than the largest dinosaurs.

Seals are great swimmers, and they can hold their breath underwater for up to two hours! This skill is particularly useful for deep sea diving and hunting.

Manatees, often referred to as "sea cows," are gentle giants that spend most of their time grazing on plants in shallow waters. They can eat up to a tenth of their body weight in plant matter every day!

The narwhal's long tusk is actually an elongated tooth, and it can grow up to 10 feet long!

Sea lions are known for their loud barks and are very social animals. They are often seen sunbathing in large groups on beaches or floating together in the water to rest.

Despite their name, killer whales or orcas are actually a type of dolphin, and they are the largest of the dolphin family. They are top predators, known for their intelligence and complex social structures.

Sea otters have the densest fur of any animal, with up to one million hair follicles per square inch! They also have a pocket in their armpits to store food and their favorite rocks!

Manatees are often called "sea cows" because they are slow-moving and eat large amounts of seagrasses!

Beluga whales are known as the "canaries of the sea" because of their wide range of vocal sounds!
